

# *FCC Activity Monitor Ver. 2.0*

PerCon Corporation is pleased to announce a new release of FCC Activity Monitor (FAM), Version 2.0. FAM can monitor any daily activity from the FCC, both Pending Applications and Granted Licenses. Any field or combination of fields in the PerCon's FCC data can be tracked, allowing for extremely robust queries. Queries can range from File Numbers or Call signs to application contact names or frequency coordinator names. Site specific searches can be performed as a radius search to protect against activity around locations. You may monitor any licenses, your licenses or even your competitor's licenses. Frequency ranges or specific frequencies searches may be performed with class of stations or radio services. Virtually any daily activity may be monitored. Get a heads up on future installations, potential interference or potential sales. Save valuable time in repetitive manual searches. On a daily basis you will receive an email with all results of pending and/or granted activity. These emails also contain quick links to the FCC and to a PerCon Excel spreadsheet that corresponds to the search results.

PerCon will assist in the development of daily queries. Customization of the email report format is available.

## Pricing:

The first monitor activity is \$250, each additional activity is \$10 per year. Changes to the search criteria are \$50 per batch. Volume pricing is available. Report customization is also available. For non-PerCon subscribers, the first monitor activity is \$500 with each additional activity costing \$25 per year. Changes to the search criteria are \$100 per change. Contact PerCon for a quote.

Please contact PerCon at [sales@perconcorp.com](mailto:sales@perconcorp.com) if you have any questions or are interested in subscribing to this service.

Daily Email Attachment Examples:
