

FCC Activity Monitor 3.1

PerCon Corporation is pleased to announce a updated product called FCC Activity Monitor (FAM) 3.0. FAM can monitor any daily activity from the FCC, both Pending Applications and Granted Licenses. Any field in the PerCon's FCC data can be tracked, allowing for robust queries. Queries can range from File Numbers or Call signs to application contact names or frequency coordinator names. Site specific searches can be performed as a radius search to protect against activity around locations. You may monitor your licenses or even your competitor's. Frequency ranges or specific frequencies can be performed with class of stations or radio services. Get a heads up on future installations or potential sales. Save valuable time in repetitive manual searches. On a daily basis you will receive an email with all results or pending and granted activity.

PerCon will assist in the development of daily queries and reporting. Customization of the email report format is available at an additional charge.

Pricing:

One-time charge of \$600 for setup. The first monitor activity is \$600, each additional activity is \$30 per year. Changes are \$300 per batch and unlimited activities are available. Report customization is also available, contact PerCon for a quote.

Please contact PerCon sales if you have any questions or are interested in subscribing to this service. This is an addon to DataLinks and requires at least a single user account.

Daily Email Attachment Examples:

Pending

Pending Search: 464 FB8 - 1 Record(s)
